

The image displays two identical, vertically oriented, elongated shapes on a light gray grid. Each shape is defined by a smooth, curved boundary and contains several small black dots. The shapes are positioned side-by-side, with the left one on the left and the right one on the right. The dots are distributed within each shape, with some near the top and bottom edges and others more centrally located. The overall appearance is that of a scientific or mathematical plot, possibly representing a distribution or a set of data points within a specific region.
